## APPENDIX D4 – DRAINAGE

### Gulley Cleansing and Route Optimisation in Kent

To cleanse the estimated 340,000 gullies in Kent, KCC have purchased a route optimisation software package to enable the most efficient way of visiting all these gullies. At the same time, we will be capturing details about these gullies – type, location, amount of silt, etc, to enable us to form a routine of visiting those gullies that become full quickly on a more frequent basis. Over time, this will allow us to build up a history of each gulley, and will direct us to those areas that need more attention.

Training in using the software has now been completed and initial routes are being generated. This, together with our vehicle tracking capability, will also enable us to re-direct machines where reactive or emergency cleansing is required in the most cost-effective way.

The system will be able to react dynamically on a daily basis to take into account reactive works, and as such routes may change every day. In the long term, it is hoped that the routes can be made available to members and parishes on a realtime basis through the portal, to enable them to check their own particular areas.
